Ladder Cable Tray

Enduro cable tray has long been the industry standard for high quality fiberglass cable tray. Made from the highest quality pultruded materials, our non-metallic cable tray has been used in the most corrosive and structurally demanding environments across the globe, including off-shore platforms, chemical plants, oil and metal refineries, and water treatment plants.

Our complete line of ladder tray solutions includes straight sections, molded fittings, mitered fittings, fasteners and accessories. In addition, our technical support resources, along with the information found in our Electrical Products Guide and Catalog, will provide everything you need to design a complete non-metallic cable tray system.

System Diagrams

EHL8	EH(Δ)8	8" (200)	$6^{11/_{16}}$ " (170)	$1^{3/4}$ " (44)	⁵ / ₁₆ " (8.0)	20C (1.5 S.F.)	Class C	6.45 (9.60)	
D-EHL10	D-EH(Δ)10	10" (250)	$\frac{8^{5}/8^{2}}{(219)}$	$\frac{2^{3/4}}{(70)}$	³ / ₈ " (9.5)	30C+ (2.0 S.F.)	-	9.39 (13.98)	

 (Δ) = Insert one of the following letters for resin designation: V = Vinyl Ester; S = Halogen-Free Polyester; VS = Halogen-Free Vinyl Ester; Y = Halogen-Free Low Smoke Plus; RT = Conductive; * (mm) value is nominal; Contact us for lead times on all Halogen-Free systems. The Enduro straight sections listed above that are UL Listed are for 10 Ft. and 20 Ft. lengths. All molded and mitered fittings associated with these tray types are also UL listed. NEMA classes and UL listings in this table are for polyester and vinyl ester resin systems only. To convert 2.0 safety factor to NEMA standard 1.5 for "+" load class, multiply published load by 1.33.

Resin Systems - Ladder Cable Tray

Below is an overview of the common resin systems we offer. When choosing a resin type for your application, we highly recommend consulting with us regarding the application to be sure the proper resin is specified. Considerations include corrosion environment, temperature, fire resistance, smoke and smoke toxicity requirements and conductivity / resistivity requirements. Regarding the corrosion environment, certain chemical concentrations and temperatures will dictate whether a polyester or epoxy vinyl ester system is preferred for optimum durability.

Isophthalic Polyester	This industrial-grade polyester resin system offers very good weathering performance (resistance to UV) and corrosion resistance. This system is especially suitable for seawater environments.
Vinyl Ester	This resin system also delivers good weathering performance, but is superior to a polyester with respect to corrosion resistance and high heat environments. Epoxy vinyl ester resins provide greater toughness and considerably higher strength at elevated temperatures. They also provide superior resistance to chemical attack in corrosive chemical service.
Conductive	This Isophthalic Polyester-based resin is formulated to comply with ABS requirements for conductivity. To pro- vide superior resistance to chemical attack, the conductive formulation is also available in a Vinyl Ester base.
Halogen-Free Polyester	This system offers similar performance attributes as our standard Isophthalic Polyester, but without the use of halogens.
Halogen-Free Vinyl Ester	This system offers similar performance attributes as our Vinyl Ester, but without the use of halogens.
Halogen-Free	This modified-acrylic based resin is suitable for applications which require extremely low-smoke development in

Halogen-Free	This modified-acrylic based resin is suitable for applications which require extremely low-smoke development in
Low Smoke Plus	the case of fire. This resin system is commonly used in tunnel applications.

Working (Allowable) Load Lbs/Ft (kg/m)					Values are applicable to all resin systems, where possible.				
System No.	8' (2.4m)	10' (3m)	12' (3.7m)	14' (4.3m)	16' (4.9m)	18' (5.5m)	20' (6.1m)	30' (9.1m)
