

OEM MANUFACTURING CAPABILITIES USING COMPOSITES

Engineered FRP Solutions

Creative Composites Group (CCG) utilizes advanced manufacturing techniques to produce lightweight, resilient and corrosion-resistant engineered composites. We offer engineering, design and manufacturing for OEM products. Our vertically integrated manufacturing capabilities support customers who require pultrusion, molded or filament wound parts for their products and systems.

Why Are OEM Parts Better?

Our OEM parts are designed and manufactured specifically to make your system and products work best for your customers. We work directly with your product designers and engineering personnel to help you lower manufacturing costs through economies of scale. CCG manufactures parts to stringent quality standards under our ISO 9001 certification.

Why Partner With the Creative Composites Group?

CCG consists of multiple locations with complimentary manufacturing processes. This vertically integrated manufacturing approach allows us to work together to provide custom manufactured composite products for structural FRP applications.

OEM Partners Choose CCG for the Following Custom FRP Capabilities:

- **Custom Composite Parts** - CCG is the market leader in structural composites for new applications. We specialize in manufacturing innovative products!
- **Extensive Design & Build Expertise** - Our engineering team is ready and willing to help customers create the exact pultruded or molded components they need for their product or system.
- **Wide Range of Manufacturing Capabilities** - We are the largest vertically integrated manufacturer of structural composites in the US, which allows us to produce best-in-class parts and products that meet and/or exceed customer requirements.
- **Lifetime Tooling Guarantee** - We ensure all tooling remains in optimal condition, so customers do not have to worry about paying for repairs.
